**Zacpeten, Group A**

Proyecto Maya-Colonial 1996

this profile is on E wall

## Profile Level 10

x - wood charcoal

A layer of large cobbles which is part of the fill seems to have been placed over a layer of smaller cobbles with abundant wood charcoal. The matrix is dark brown below is a well distinguishable clayey matrix  
 \* devoid of carbon and large stones

Base of Level '02  
Platifact  
JP  
7/31/96

A piece of gold foil was found on the second step of the northern stairway approximately 15cm to the west of the eastern ballustrade. It was located in a layer of soil at least about 1/2 cm above the actual stone of the stairway. This seems to confirm my suspicion that a cache was deposited somewhere in this area - do not forget the red stepped vessels to the southeast.

I guess this suggests some Yucatecan connection (as does the <sup>griffin</sup> bell font nearby)

Planview of Structure

Units 524, 603; 523, 603  
and 522, 603

TP

3/6/97

0 20 cm N

When checking the planview of Str 605, I noticed that this area was missing. This is a replacement drawing, should the drawing by Rogan Puga be recovered, it should be used instead of this one so that the entire structure is drawn by the same person.
